Let's Start!

How do you set HTML server controls in a page?

Learning Outcome:

Describe common simple incidents at work in a simple spoken or written situation with a supportive interlocutor. Represent the solution outline to the problem presented by the customer through making case of use diagrams, facing the problem to the customer following rules and protocols of the organization.

Ask your partner:

- What stages are necessary in an ASP.NET application life cycle?
- What does an application manager object do in ASP.NET?

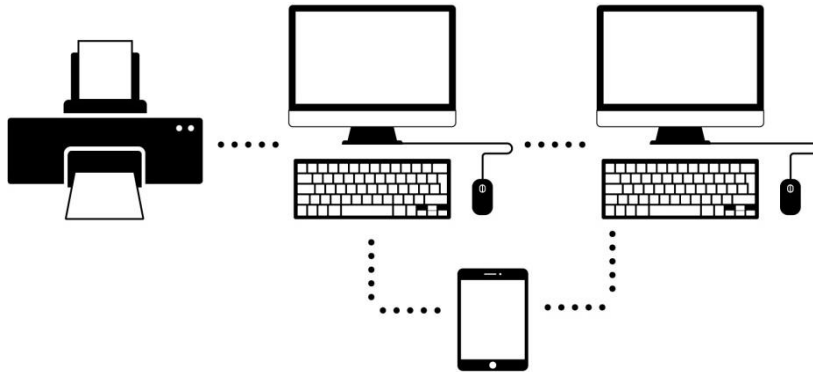

Can Do Statements:

- I can talk about the HTML server controls for ASP.NET.
- I can mention some advantages of using HTML server controls for ASP.NET.
- I can identify some HTML server control names and their corresponding tags.

Let's Explore!

Peter is writing a code using server controls in ASP.NET.

Instructions: Read the text below.

Max: Hey Pete, what are you doing?

Peter: I'm trying to do an assignment for Mr. Simmons class. I have to write a code to give an example of HTML server controls for ASP.NET.

Max: HTML server controls? Are those the buttons, we often use in a graphical user interface?

Peter: Yes, you know, they are based on the standard HTML controls but server controls make server-side processing possible.

Max: Are header tags and input elements server-side controls too?

Peter: Not really, those elements don't have to be processed by the server.

Max: Ok, so, do server controls have any advantage compared to standard controls?

Peter: When you choose to use server controls, you can enable static tables for layout purposes. Besides that, you are allowed to transform HTML pages to make them run in the ASP.NET framework.

Max: I see, and what do you have to do to add an HTML server control?

Peter: Well, when you have to use an element as a control, you normally have to write the HTML syntax of the element, but in addition to this, you proceed to add a `runat="server"` attribute.

Max: You can't forget to code the ID attribute of each element.

Peter: You're right; the ID attribute helps to have access to the controls' content programmatically.

Max: What kind of HTML server control names do you know?

Peter: Well, there are many, for instance, `HtmlInputFile`, its HTML tag is `<input type = file >`. `HtmlInputImage`, `<input type = image >`; `HtmlTitle`, `<title >element`, etc.

Max: That's hard to remember, and what do you plan to create for your assignment?

Peter: I want to create a basic HTML table, to get basic information from the users, it is like a form...

Let's Practice!

Do you know the meaning of these words?

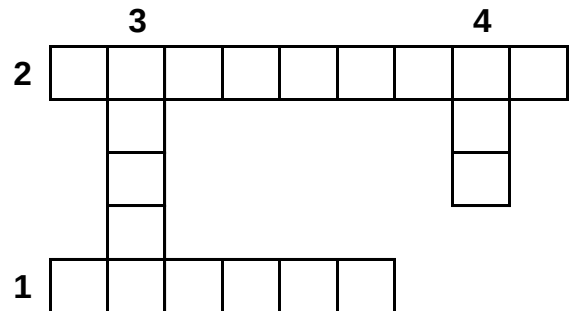

Instructions: Read the clues. Complete the crossword.

Across

1. A _____ side is a type of web page programming technique in which a user's request has to be processed
2. ID _____ has to identify an element in an HTML code.

Down

3. A static _____ which doesn't have to update during execution process.
4. Header _____ is a part of an HTML code which has to organize headings to set an outline of a page.

Let's Practice!

Do you know some advantages of using HTML server controls for ASP.NET.

Instructions: Select the correct answer.

1. _____ server controls have any advantage compared to standard controls?
 - a. Does
 - b. Do
 - c. Were
2. When you choose to use server controls, you _____ enable static tables for layout purposes.
 - a. have to
 - b. has to
 - c. go to
3. Besides that, _____ to transform HTML pages to make them run in the ASP.NET framework.
 - a. we have at
 - b. you has
 - c. you have
4. You have _____ that HTML elements within an ASP.NET file are programmatically inaccessible to page developers.
 - a. to knowing
 - b. to know
 - c. to write

Extension Activity

HTML server control names and their corresponding tags.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for ten of the most important HTML server control tags.
- Design a word search with the tags you found.
- Share your word search with a classmate.

Self-Assessment

Yes**No**

- I look for ten of the most important HTML server control tags.
- I design a word search.
- I share my word – search with a classmate.

Target Words

- **graphical user interface** (noun) a mechanism that allows the user to visualize and interact with all the information, graphical content and commands of a computer software
e.g. Are those the buttons, we often use in a graphical user interface?
- **server-side processing** (noun) a type of web page programming technique in which a user request can be processed by a server
e.g. They are based on the standard HTML controls but server controls make server-side processing possible.
- **header tag** (noun) a part of an HTML code that can organize headings to set an outline of a page
e.g. Are header tags and input elements server-side controls too?
- **static table** (noun) a table which content doesn't have any update during execution process
e.g. When you choose to use server controls, you can enable static tables for layout purposes.
- **ID attribute** (noun) a factor that identifies an element in an HTML code
e.g. You can't forget to code the ID attribute of each element.
- **Programmatically** (adverb) when something is run by a program
e.g. You're right; the ID attribute helps to have access to the controls' content programmatically.

Learning Points

Verbs with Infinitives in Affirmative, Negative and Interrogative Statements

In English, there are some *infinitive verbs* that are always followed by other verbs such as the verb *have to*.

These verbs are always followed with the preposition *to* and they can express different meanings. When you use the infinitive verb *have to*, it refers to the purpose of doing something:

- I **have to** write a code using HTML server controls.

You can use *verbs with infinitives* in negative and interrogative statements too, for instance:

- I **don't have to** write a code using HTML server controls.
- **Do** you **have to** write a code using HTML sever controls?

There are some other meanings when using *infinitive verbs* such as:

- Verbs that express thinking or feeling: *decide, choose, hope, like, prefer, expect, etc.*
- Verbs of speaking: *promise, agree, refuse, etc.*
- Other verbs: *want, help, try, need, manage, plan, need etc.*

Look at the chart to observe the structures when using *verbs with infinitives*:

AFFIRMATIVE STATEMENTS			
SUBJECT	VERB WITH INFINITIVE	COMPLEMENT	
I	have to write	a code using HTML server controls.	
NEGATIVE STATEMENTS			
SUBJECT	AUXILIARY VERB	VERB WITH INFINITIVE	COMPLEMENT
I	don't	have to write a code	a code using HTML server controls.
INTERROGATIVE STATEMENTS			
AUXILIARY VERB	SUBJECT	VERB WITH INFINITIVE	COMPLEMENT
Do	I	have to write	a code using HTML server controls.

Examples

- *I have to write a code to give an example of HTML server controls for ASP.NET.*
- *Not really, those elements don't have to be processed by the server.*
- *What do you have to do to add an HTML server control?*

Control Names and HTML Tags

You use HTML server controls to program useful buttons in a page interface. :

In the following chart, you can find some control names and their HTML tags:

CONTROL NAME	HTML TAG
HtmlAnchor	<a> element
HtmlButton	<button> element
HtmlForm	<form> element
HtmlHead	<head>element
HtmlImage	 element
HtmlInputButton	<input type=button submit reset>
HtmlInputCheckbox	<input type=checkbox>
HtmlInputFile	<input type = file>
HtmlInputHidden	<input type = hidden>
HtmlInputImage	<input type = image>
HtmlInputPassword	<input type = password>
HtmlInputRadioButton	<input type = radio>
HtmlInputReset	<input type = reset>
