Let's Explore!

Nick is preparing an oral presentation about HTML editors.

Instructions: Read the text below.

Kim: Hey Nick, what are you doing?

Nick: I'm preparing an oral presentation about HTML editors for Mr. Sander's class.

Kim: Do you need any help?

Nick: Yes, I'll appreciate if you give me a hand with some questions.

Kim: Sure! Let's review together. Ok, what are HTML editors used for?

Nick: Web developers need HTML editors to create websites; these computer programs can provide developers with different kind of functionalities when editing webpages.

Kim: What kind of features does an HTML editor need?

Nick: Code highlighting or autocompletion are two basic services in simple editors. There isn't any efficient editor without these two important functions; however, some editors can offer extra features to help developers.

Kim: Are HTML editors available for free?

Nick: Yes, there are a lot options but there aren't free editors that offer full functionality of paid editors. The main difference is that paid versions get frequently updated; they can include a better color scheme and users can upload data directly to a server.

Kim: What are some examples of free HTML editors for windows?

Nick: There are editors like Phase 5, Programmer's Notepad, SynWrite, PlainEdit. Net, Notepad++ or Sublime Text 2.

Kim: What are some features of free HTML editors for windows?

Nick: Phase 5 has syntax debugger, tag completion, indentation assistance and customizable templates. It runs with different versions of windows operating systems and servers. Programmer's notepad comes with an editor to create code snippets and can be adapted to personal needs by means of adds-on.

Kim: What about SynWrite and Sublime Text 2?

Nick: SynWrite has basic functionalities as syntax highlighting, code folding and programmers can improve the interface with plugins from Pyhton. Sublime Text 2 is one of the best options for beginners. It supports a lot of computer languages and you can optimize its performance with extensions aids from Package control.

Learning Points

There Is / There Are in Negative Statements

In order to express the idea of the existence of something both in singular and plural forms, the English language combines the word **there** and the Verb To **Be**.

The negative form of **there is** and **there are** only adds the word **not** after the verb to be, or conjugates the verb to be with the negative and contracts it as **isn't** or **aren't**. Some examples are:

- **There isn't** anything better as a functional HTML editor.
- **There aren't** many differences between paid and free editors.

Negative Forms	There is - present singular form
	There is not + noun (singular)
	There isn't + noun (singular)
	There are- present plural form
	There are not + noun (plural)
	There aren't + noun (plural)

Examples

- *Code highlighting or autocompletion are two basic services in simple editors, there isn't any efficient editor without these two important functions.*
- *There are a lot options but there aren't free editors that offer full functionality of paid editors.*
