Let's Start!

Why do you think HTML is important?

Learning Outcome:

Describe common simple incidents at work in a simple spoken or written situation with a supportive interlocutor.

Represent the solution outline to the problem presented by the customer through making case of use diagrams, facing the problem to the customer following rules and protocols of the organization.

Ask your partner:

- What do you know about HTML?
- Do you know how HTML works? Can you give some examples?

Can Do Statements:

- I can understand written information about the importance of HTML for web design.
- I can discuss the importance of HTML tags in webpages.
- I can summarize information from a text.

An HTLM tutorial for beginners

Instructions: Read the text below.

Why is HTML important?

Web developers know that the most significant languages of websites and web content are HTML, CSS and JavaScript. However, it is necessary to keep in mind that only HTML can be considered the backbone of a web page.

You may wonder why this language and not the others, the reason is simple, HTML is in charge of the page structure which is far more important than controlling the page design or page behavior as CSS or JavaScript respectively do; when you don't have HTML in a page, there is no essential content, so you basically don't have a web page.

HTML is a markup language; when we use it, it allows displaying different multimedia content on a website and provides the user hyperlinks to move within different pages. Thus, what HTML basically does is to mark content with tags to definite features and establish relationships among different types of content in a website.

The greatest strength of HTML language is its simplicity, HTML syntax can be really easy to learn and accessible to different kinds of public, not only programmers. The trademark of HTML code are tags, by only adding angle brackets `<>`, you can transform regular text into a page component, for example a regular letter **b** can change into bold text, the word `mark` can make a piece of text appear highlighted or the word `video` define a video or movie.

To sum up, we can say that HTML defines internet itself, HTML makes possible to display and interact with a diversity of contents online, and because of its simplicity, it can be really easy for you to learn it and why not to author your own HTML page.

Let's Practice!

Let's check the importance of HTML

Instructions: Use the words from the Word Bank to complete each sentence.

Word Bank

Is / displayed / provided / was / display / provides / are / provide / displays

1. HTML_____ a markup language that_____ different multimedia content on a website and _____ the user hyperlinks to move within different pages.

Let's Practice!

Check the importance of HTML

Instructions: Organize the mystery sentence.

1. HTML / content / marks / tags / with / with / different / features / of / types content / of

2. The / establishes / HTML / relationships / defines / with / content / the / of / a site / web.

3. The / HTML / trademark / of / code / tags / are.

4. The / tags / HTML / are / learn / easy / to / accessible / and / to / different people / kinds / of.

Extension Activity

Now it's your turn to write about HTML uses

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for an article about the most recent usages and updates for HTML
- Get the main information of the text.
- Organize the information in a Venn diagram.
- Explain to your classmates the most recent usages and updates for HTML.

Self-Assessment

Yes

No

- I find information about the most recent usages and updates for HTML.
- I get the main idea of the text.
- I organize the information by using a Venn diagram.
- I explain to my partners the most recent usages and updates for HTML.

Target Words

- hyperlink** (noun): a mechanism to connect a page or document with another one by just clicking on it
e.g. HTML is a markup language; when we use it, it allows displaying different multimedia content on a website and provides the user hyperlinks to move within different pages.
- strength** (noun): an advantage or positive point of something
e.g. The greatest strength of HTML language is its simplicity, HTML syntax can be really easy to learn and accessible to different kinds of public, not only programmers.
- trademark** (noun): refers to a symbol or mark that identifies something in particular
e.g. The trademark of HTML code are tags, by only adding angle brackets <> you can transform regular text into a page component, for example a regular letter b can change into bold text .

- backbone** (noun): an essential part of a structure
e.g. However, it is necessary to note that only HTML can be considered the backbone of a web page.
- page behavior** (noun): refers to all the actions or operations that can be programmed on a webpage
e.g. HTML is in charge of the page structure which is far more important than controlling the page design or page behavior as CSS or JavaScript respectively do.
- markup language** (noun): a type of coding that uses tags to add web features to normal text
e.g. HTML is a markup language; when we use it, it allows displaying different multimedia content on a website and provides the user hyperlinks to move within different pages.

Learning Points

The Simple Present Tense Statements with When to Talk about Facts

You can use the adverb *when* with the *present simple* to talk about real conditions.

You can use this structure when you want to express what people generally do in certain situations.

In *when clause*, you describe a situation, and in the other clause you present the result or consequence of the previous situation, for example:

- **When** you know the rules of tags working together, it's really simple to create an HTML page.

Or:

- It's really simple to create an HTML page, **when** you know the rules of tags working together,

These are the structures

When + Simple Present + Complement, Simple Present + Complement.
Simple Present + complement, **when** + Simple Present + Complement.

Examples

- *When you don't have HTML in a page, there is no essential content, so you basically don't have a web page.*
- *HTML is a markup language; when we use it, it allows displaying different multimedia content on a website and provides the user hyperlinks to move within different pages.*

Learning Points

How to Summarize an Article

Summarizing is taking up the details of a document in order to give a brief explanation.

When you want to sum up an article, you should consider the following steps:

- Before reading the article, scan and highlight main ideas and key words.
- Read the article carefully. While reading, take notes of the remarkable ideas you find but use your own words.
- Do not rephrase the same article words or sentences since your summary can probably end up in plagiarism.
- Once you have an outline of the main facts of your article, start writing your summary using the ideas you wrote before.
- Organize your text in paragraphs. The first paragraph should be an introduction in which you state the relation between the article and your text. Then, you will provide supporting details about the topic keeping an objective point of view and finally you should give some conclusions according to the information provided in the article.
- Do not forget to mention bibliography information such as authors' full name when necessary and avoid to quote directly from the article.
- Remember not to include any personal opinion or point of view.
- The length of your text should be shorter than the original.
- Once you finish, proofread your summary.
